OBJECTIVE

Dynamic and result-driven **Platform DevOps Engineer** with total 9 years in which relevant **4+ years** of extensive experience crafting, securing, and enhancing AWS environments. Actively pursuing a technical role to apply expertise in **CI/CD, DevOps, Cloud Security** and **Cloud administration** fortifying critical deployments. Proficient in automating infrastructure, implementing robust security protocols, and seamlessly integrating multi-cloud activities. Very Eager to contribute software product development, innovative solutions, fostering collaboration across teams for streamlined operation for company growth.

PROFESSIONAL SUMMARY

- Collaborating with teams to build and deliver solutions implementing Virtualization, **IAAS** and **containerized architectures in AWS cloud** environments.
- Develop reusable and parameterized IAAC templates for automated deployment of **AWS resources** using **Terraform**.
- Responsible for **configuration** management, **release** management, **automatic/manual deployments** & troubleshooting.
- Server automation and configuration management using **Ansible**.
- Proficient in developing CI/CD Pipelines using **Jenkins**.
- Hands-on experience in implementing micro service-based applications architecture using containerization tools like **Docker** and container orchestration tools like **Kubernetes**.
- Solid experience with Windows (Windows server) and **Linux** (Ubuntu 18.04) administration.
- Writing various **scripts** mainly yml, groovy, terraform, shell and python.
- Install, configure, and manage tools within **the AWS, AZURE and GCP** cloud environment.
- AS a **SRE** focuses on delivery and stability of production environment.
- Strong knowledge of AWS S3

EXPERIENCE

1) Company: **Global Payments Inc.**

- Designation: **Platform DevOps Engineer**
- Duration: June 2023 – Present (3 Years 1 Month)
- Employment Partner(s): TSYS Card Tech Services India | Webarial Pvt. Ltd.
- **Product: Portico Payment Gateway**
- Project Overview:
 - **Portico:** Portico Payment Gateway
 - Supported the engineering and cloud operations of Portico, a high-volume enterprise payment gateway used for secure card transaction processing. The platform was designed with strong security controls, tokenization, encryption, automated infrastructure, and cloud-native deployment practices to deliver highly available and compliant payment services.
- **Roles and Responsibilities:**
 - Engineered and maintained secure, scalable AWS infrastructure using Terraform, supporting highly available payment processing services and cloud-native workloads.
 - Design and enhanced automated CI/CD pipelines for containerized applications using Jenkins, Docker, Kubernetes, and Git, accelerating release cycles while maintaining deployment reliability.
 - Implemented DevSecOps best practices by integrating infrastructure security, IAM policies, encryption, cloud compliance, and security automation into deployment workflows.
 - Managed production Kubernetes environments, monitored platform health using CloudWatch, Prometheus, and Grafana, and proactively resolved performance and availability issues.
 - Partnered with software engineering, product, and security teams to deliver resilient platform solutions, improve operational efficiency, and support continuous platform modernization.

2) Company: **Jio Platforms Limited**

- Designation: **Cloud DevOps Engineer**
- Duration: August 2017 – June 2023 (5 Years 11 Months)
- Employment Partner(s): Swarish Technology | ASM Enterprise Solution | Foretell Technologies
- **Product: Jio Document Management System (Enterprise Platform)**
- Projects Overview:
 - **JDMS:** Jio Document Management System (Enterprise Platform)
Developed and maintained an enterprise-scale document management platform used to securely store, organize, and manage business-critical documents across multiple business functions.
The platform supported centralized document storage, secure access control, audit trails, workflow automation, and highly available cloud infrastructure to improve operational efficiency and governance.
- **Roles and Responsibilities:**
 - Designed, deployed, and managed scalable AWS cloud infrastructure using Infrastructure as Code (Terraform) to support secure and highly available production environments.
 - Built and optimized end-to-end CI/CD pipelines using Jenkins, Git, Docker, and Kubernetes, enabling reliable and automated application deployments.
 - Managed Kubernetes clusters, containerized applications, and cloud resources while ensuring platform stability, performance, and efficient resource utilization.
 - Automated infrastructure provisioning, configuration management, and operational tasks using Ansible, Shell scripting, and Python to improve deployment consistency and reduce manual effort.
 - Collaborated with development, QA, and infrastructure teams to troubleshoot production issues, strengthen platform reliability, and support continuous delivery in Agile environments.

EDUCATIONAL QUALIFICATION

- **Bachelor of Engineering in Information Technology** from Nagpur University in 2017.

CERTIFICATIONS & ACCOMPLISHMENTS

- **AWS Certified Solution Architect - Associate**
Validation ID: EYZ1685JFEE4Q5GT
Validate at: <http://aws.amazon.com/verification>
- **Certified Kubernetes Administrator (CKA)**
Certification ID: LF-i5x86nknm7
Validate at: <https://training.linuxfoundation.org/certification/verify/>
- **HashiCorp Certified Terraform - Associate (002)**
Validate at: [Terraform-Associate-certi](#)

Declaration

- I hereby declare that the above-mentioned information is correct up to my knowledge and I bear the responsibility for the correctness of the above-mentioned particulars.
